Subject:	Re: Sharing test networks outside of Ideker Lab

Hi Barry,

Yes it's fine for the file to be public, and I'm happy if it helps with testing. Note that we weren't super knowledgeable about the legality of data reuse when I made that network. Therefore that file contains some resources, such as MSigDB, which we've now removed due to licensing issues.

For Project Rephetio, our current project which builds a network for drug repurposing, our cytoscape files are online. See network.cys and network-lines.cys. You can also use these files test visual aspects. However, I wouldn't use them for actual network analyses as we used some hacks to create them.

Best,
Daniel

Hi, Daniel –

You have been very generous in giving us your Cytoscape network to test with. We've made good use of it.

New question: Cytoscape developers outside of our group are interested in testing with it. Before I expose it, I'd like to double-check with you. While the use would be within the broader Cytoscape development community, things like this have a way of leaking out over time. So, the real question would be whether you're OK exposing it publicly for testing purposes.

What do you think??

Here's what you've let us use so far:

network.cys	8/6/2015 11:40 AM	CYS File	4,739 KB
